

You've done it again. You've built the perfect widget, but it's not what you want. It's another challenge to get everything just right. What if you could build this widget without actually building it? It's time to get prototyping with Winbreadboard 4.1 - the most advanced GUI toolkit for app development on Windows! With Winbreadboard you can create prototypes of your apps before they exist in code, explore UI layouts before settling on a final design, and validate your design assumptions about how users will interact with your product before investing in engineering resources. Entering the era of Radical Prototyping doesn't have to be difficult or costly. With Winbreadboard, it can be fun and easy instead.
